

Clarity Aligners	Invisalign	
2 Material Options (Flex and Force)	1 Material Option	Having two material options allows us to make your treatment most efficient. Clarity Flex is a 5-layer super flexible material that is best for rotations. Clarity Force is a single-layer, stiffer material that is best for large movements like expansion.
Straight Gumline	Scalloped Gumline	Clarity aligners are trimmed straight across the gumline, this allows for full engagement of the tooth surface during movement. It is also ideal for teeth that are not fully erupted.
Flexible Attachment Tray	Stiff Attachment Tray	A Flexible Attachment tray prevents attachment breakage during your first appointment making it a smoother process.
